

# How to Establish a VPN Connection to DePaul's Network Using a Mac

## Summary:

Installing DePaul's VPN client on a Mac and establishing a connection.

## Overview:

1. Download and install Aventail Connect (DePaul's VPN client)
2. Launch the VPN client and configure client settings
3. Establish connection

## Notes:

- Must be using a Mac OSX

---

## Instructions

1. Start by navigating to "http://offices.depaul.edu/is/security/tools-downloads/Pages/data-center-vpn.aspx"

- **Note:** This is the landing page for the VPN client. Everything needed to download, install and connect can be found here.

2. Go to "Mac OS X Client" and click the first link as displayed on the right →

- **Note:** This will start the VPN client download.

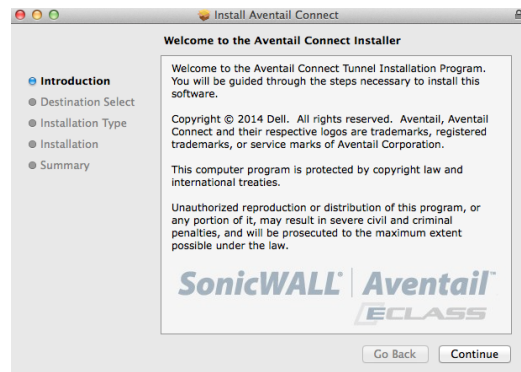

Mac OS X Client

[Click here](#) → to download the VPN client

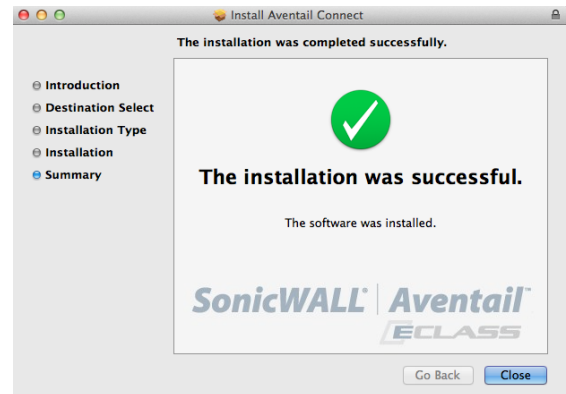

3. Select the downloaded file to start the application process →

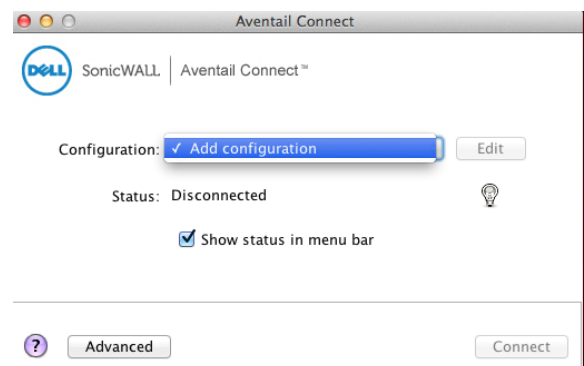

4. Start the installation process, select "Continue"

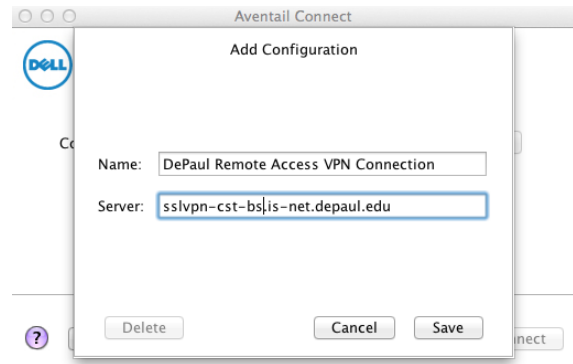

5. Select the location of your installation, then proceed to click "Install". You may be prompted to enter your Mac username and password →
6. You should now receive a confirmation that the installation was successful →

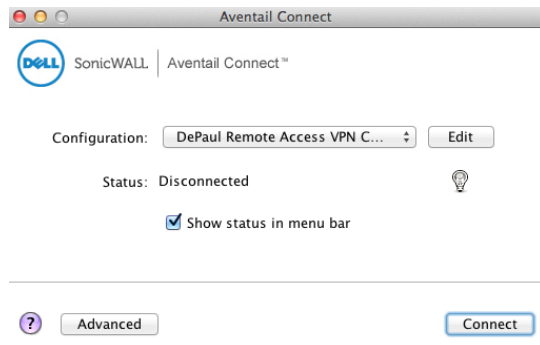

7. Open the client and you should be presented with this screen →
  - **Note:** DePaul's VPN Mac client does NOT automatically configure settings; that will be done next.

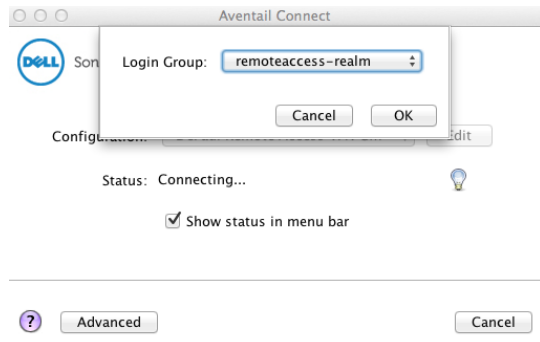

11. Click on "Add Configuration". Enter **DePaul Remote Access VPN Connection** for the "Name" field and **sslvpn-cst-bs.is-net.depaul.edu** for the "Server" field →
  - **Note:** Proceed to click "Save" when done

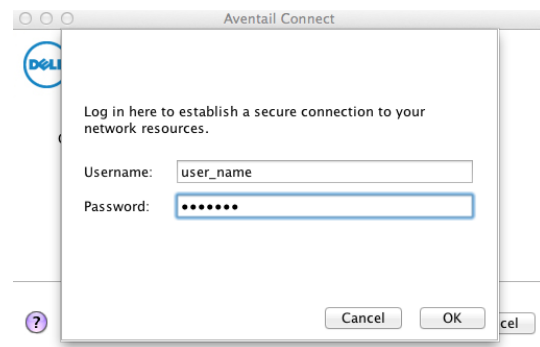

10. Click "Connect" →

9. A popup will appear asking for "Login Group". Click "OK" →
  - **Note:** The login group is automatically populated for you, all you have to do is click "OK"

8. Proceed to login with your **Campus Connect** "Username" and "Password" →

12. You will now see **Connected** next to "Status" →
